

Reference : 01-352 Product : BLOOD AGAR BASE

# Specification

Nutrient rich medium, suitable for the isolation of pathogenic microorganisms from clinical specimens.

#### Formula \* in g/L

Meat extract	10.00
Tryptone	10.00
Sodium chloride	5.00
Agar	15.00

Final pH 7.3 ±0.2 at 25 °C

\* Adjusted and /or supplemented as required to meet performance criteria

# Directions

Suspend 40 g of powder in 950 mL of distilled water. Heat to the boiling point and distribute into suitable containers. Sterilize in the autoclave at 121°C for 15 minutes. Let it cool to 45-50°C and then add defibrinated blood in a proportion of about 5% or to the desired enrichment level.

### Description

Blood Agar Base may be used for the cultivation of non fastidious microorganisms, since it has a balanced nutrient base. For fastidious microorganisms, it is advisable to add special enrichment supplements, such as ascitic liquid, egg yolk, etc...

This medium, with the addition of blood, is suitable for studies in haemolytic activity, but for the isolation of pathogens Blood Agar Base Columbia type (Art. No. 01-034) is recommended.

# **Quality control**

# Incubation temperature: 37 °C ± 1.0

Incubation time: 24-48 h

**Inoculum:** Practical range 100 ± 20 CFU. min. 50 CFU (productivity), according to ISO 11133:2014/Amd 1:2018. Spiral Plate Method.

### Microorganism

Staphylococcus aureus ATCC <sup>®</sup> 6538
Enterococcus faecalis ATCC <sup>®</sup> 19433
Escherichia coli ATCC <sup>®</sup> 8739
Streptococcus pyogenes ATCC <sup>®</sup> 19615
Streptococcus pneumoniae ATCC <sup>®</sup> 49619
Streptococcus agalactiae ATCC <sup>®</sup> 12386

Growth
Productivity > 0.70

# Remarks ß-hemolysis g-hemolysis ß-hemolysis a-hemolysis ß-hemolysis

Streptococcus pneumoniae ATCC 49619

Staphylococcus aureus ATCC 25923
